

BINKS® **MODEL 95AR AND 95ARV**
AUTOMATIC CONVENTIONAL AIR SPRAY GUN
95AR 6467-XXXX-X
95ARV 6489-XXXX-X CERAMIC COATING (OBS)

STANDARD SET-UPS AVAILABLE (See page 9).
OPTIONAL SET-UPS PLEASE ORDER SEPARATELY
(See pages 8 and 9).

AIR SPRAY GUN WITH STAINLESS STEEL FLUID INLET

**MODEL 95AR AND 95ARV AUTOMATIC AIR
SPRAY GUNS**

Ideal for coating test laboratories and where repeated fluid flow adjustments are required. The 95AR Automatic Spray Gun is a conventional style air spray gun. It incorporates all stainless steel fluid inlet, fluid nozzle, and fluid needle; 95ARV incorporates stainless steel fluid inlet, fluid nozzle with T.C. insert and fluid needle with T.C. tip for spraying a wide variety of conventional and waterborne coatings. It is also pneumatically activated for application with reciprocating, rotary, spindle machines, and in stationary gun set-ups. Exceptionally rugged in construction, the Binks

Models 95AR and 95ARV automatic guns are built to stand up under hard, continuous use. However, like any other fine precision instruments, their most efficient operation depends on a knowledge of their construction, operation, and maintenance.

Properly handled and cared for, these guns will produce beautiful, uniform finishing results long after other spray guns have worn out.

▲ CAUTION

Before removing any components from spray gun, shut off air and material pressure.

In this part sheet, the words **WARNING**, **CAUTION** and **NOTE** are used to emphasize important safety information as follows:

WARNING

Hazards or unsafe practices which could result in severe personal injury, death or substantial property damage.

CAUTION

Hazards or unsafe practices which could result in minor personal injury, product or property damage.

NOTE

Important installation, operation or maintenance information.

WARNING

Read the following warnings before using this equipment.

READ THE MANUAL

Before operating finishing equipment, read and understand all safety, operation and maintenance information provided in the operation manual.

OPERATOR TRAINING

All personnel must be trained before operating finishing equipment.

EQUIPMENT MISUSE HAZARD

Equipment misuse can cause the equipment to rupture, malfunction, or start unexpectedly and result in serious injury.

LOCK OUT / TAG-OUT

Failure to de-energize, disconnect, lock out and tag-out all power sources before performing equipment maintenance could cause serious injury or death.

AUTOMATIC EQUIPMENT

Automatic equipment may start suddenly without warning.

PRESSURE RELIEF PROCEDURE

Always follow the pressure relief procedure in the equipment instruction manual.

KEEP EQUIPMENT GUARDS IN PLACE

Do not operate the equipment if the safety devices have been removed.

KNOW WHERE AND HOW TO SHUT OFF THE EQUIPMENT IN CASE OF AN EMERGENCY

WEAR SAFETY GLASSES

Failure to wear safety glasses with side shields could result in serious eye injury or blindness.

INSPECT THE EQUIPMENT DAILY

Inspect the equipment for worn or broken parts on a daily basis. Do not operate the equipment if you are uncertain about its condition.

NEVER MODIFY THE EQUIPMENT

Do not modify the equipment unless the manufacturer provides written approval.

NOISE HAZARD

You may be injured by loud noise. Hearing protection may be required when using this equipment.

PROJECTILE HAZARD

You may be injured by venting liquids or gases that are released under pressure, or flying debris.

PINCH POINT HAZARD

Moving parts can crush and cut. Pinch points are basically any areas where there are moving parts.

STATIC CHARGE

Fluid may develop a static charge that must be dissipated through proper grounding of the equipment, objects to be sprayed and all other electrically conductive objects in the dispensing area. Improper grounding or sparks can cause a hazardous condition and result in fire, explosion or electric shock and other serious injury.

WEAR RESPIRATOR

Toxic fumes can cause serious injury or death if inhaled. Wear a respirator as recommended by the fluid and solvent manufacturer's Safety Data Sheet.

TOXIC FLUID & FUMES

Hazardous fluid or toxic fumes can cause serious injury or death if splashed in the eyes or on the skin, inhaled, injected or swallowed. LEARN and KNOW the specific hazards or the fluids you are using.

FIRE AND EXPLOSION HAZARD

Improper equipment grounding, poor ventilation, open flame or sparks can cause a hazardous condition and result in fire or explosion and serious injury.

MEDICAL ALERT

Any injury caused by high pressure liquid can be serious. If you are injured or even suspect an injury:

- Go to an emergency room immediately.
- Tell the doctor you suspect an injection injury.
- Show the doctor this medical information or the medical alert card provided with your airless spray equipment.
- Tell the doctor what kind of fluid you were spraying or dispensing.

GET IMMEDIATE MEDICAL ATTENTION

To prevent contact with the fluid, please note the following:

- Never point the gun/valve at anyone or any part of the body.
- Never put hand or fingers over the spray tip.
- Never attempt to stop or deflect fluid leaks with your hand, body, glove or rag.
- Always have the tip guard on the spray gun before spraying.
- Always ensure that the gun trigger safety operates before spraying.

PROP 65 WARNING

WARNING: This product contains chemicals known to the State of California to cause cancer and birth defects or other reproductive harm.

IT IS THE RESPONSIBILITY OF THE EMPLOYER TO PROVIDE THIS INFORMATION TO THE OPERATOR OF THE EQUIPMENT. FOR FURTHER SAFETY INFORMATION REGARDING THIS EQUIPMENT, SEE THE GENERAL EQUIPMENT SAFETY BOOKLET (77-5300).

Binks Models 95AR and 95ARV AUTOMATIC CONVENTIONAL SPRAY GUNS
Typical Arrangement Diagram and Hook-up for
Combined Fan and Atomizing Air

For some applications each gun may require individually regulated fluid and air inlet lines.

Binks Models 95AR and 95ARV AUTOMATIC SPRAY GUNS
Typical Arrangement Diagram and Hook-up for
Separate Fan and Atomizing Air
 (See Page 5 for Internal Modifications to Gun)

For some applications each gun may require individually regulated fluid and air inlet lines.

GENERAL NOTES

1. Have at least 55-60 P.S.I. air pressure for cylinder's operating air. (Maximum 90 PSIG)
2. To reduce overspray and obtain maximum efficiency, always spray with lowest possible fluid/air pressure that produces an acceptable spray pattern.
3. The air line from gun to 3-way valve should be as short as possible for rapid operation.
4. All air used in the gun should be dirt and moisture

- free. (This is accomplished by using an oil and water extractor).
5. Shut off all fluid and air lines to gun if gun is to stand idle for any length of time. (This is to prevent "build-up" or accumulation of minute leaks in the system and turning on the gun).

TO CHANGE FROM COMBINED FAN AND ATOMIZING AIR TO SEPARATE FAN AND ATOMIZING AIR

1. Unscrew ratchet housing assembly (28) and remove material needle (22) and attached parts (23, 24, 25) (see assembly drawing page 10).
2. Remove piston assembly (18) by injecting low pressure air into cylinder air port (A).
3. With 5/32" allen wrench, remove plug (16) from hole (B) on inside of cylinder.
4. Insert set screw (50) into position as shown in side cut-away. (Set screw is packaged loose.)
5. Re-install plug (16).
6. Re-install piston (20), 2 springs (26, 27), material needle (22) and ratchet housing assembly (28). (See assembly drawing page 10).
7. Remove plug (47) from the fan air port (C).
8. Install fitting (36) into port (C). (Fitting is packaged loose.)

⚠ WARNING

Use of excessive pressure will cause piston to exit gun body at high velocity, possibly resulting in personal injury or damage to spray gun components. When removing the piston, aim back of gun in a safe direction and do not use excessive air pressure.

NOTE

Double male nipple (36) shipped loose in a separate bag.

Plug (47)

Remove and install D.M. Nipple (36)

Fan Air Inlet (Optional)

NOTE

Set screw (50) shipped loose in a separate bag.

SETUP FOR SPRAYING

CONNECTING GUN TO MATERIAL HOSE

Gun should be connected by a suitable length of 3/8" diameter material hose fitted with a connector with a 3/8" NPS(f) nut at gun end. 1/4" diameter hose is recommended for use with low viscosity materials. (Fluid hoses of different composition are available for special fluids. See Binks hose catalog for hose selection.)

CONNECTING GUN TO ATOMIZING AIR

Gun should be connected by a suitable length of 5/16"

or 3/8" diameter air hose fitted with a connector and a 1/4" NPS(f) nut at gun end.

CONNECTING GUN TO CYLINDER AIR

Gun should be connected with 3/16" I.D. or 1/8" I.D. air hose of shortest length possible with 1/4" NPS(f) connector. Cylinder air must be connected to a 3-way manual air valve or 3-way solenoid valve to operate properly.

OPERATING THE MODEL 95AR AUTOMATIC SPRAY GUN

CONTROLLING THE MATERIAL FLOW

When fed from a pressure supply, an increase in the material pressure will increase the rate of flow. Correct fluid nozzle size insures correct material flow rate. If necessary, fluid flow can also be adjusted by adjusting the amount of needle travel. This is done by loosening lock nut (29) and adjusting control knob (30) until the correct needle travel is achieved.

ADJUSTING AIR AND FLUID TIMING

A 1/16" gap between the air piston assembly (18) and needle body (24) should be maintained (see figure 1). This will create needle motion that will allow adequate air flow before the fluid starts flowing. The gap may be adjusted by partially removing the material needle (22),

screwing the needle either in or out of the needle body (24) and locking it back into the gun while being sure to check the clearance between the air valve piston (18) and the needle body (24).

ADJUSTING THE SPRAY PATTERN

The width of the spray pattern is controlled by the side port control assembly (7). (See page 10). Turning this control clockwise until it is closed will give a round spray, turning it counterclockwise will widen the spray into a fan shape. The fan spray can be turned anywhere through 360° by positioning the air cap assembly (1) relative to the gun. To effect this, loosen air cap assembly, position nozzle, then, re-tighten air cap assembly.

Figure 1

FLUID NEEDLE ADJUSTMENT DIAGRAM

MAINTENANCE

LUBRICATION

Monthly: Remove piston assembly (18) and lubricate the air cylinder chamber and needle valve spring with a coating of Gunners Mate (51). Also, lubricate side port control assembly (7) with oil.

⚠ CAUTION

Never use lubricants containing silicone since these lubricants can cause finish defects. Binks Gunners Mate (51) is recommended.

REMOVAL OF PISTON

To remove the piston, first unscrew the ratchet housing assembly (28), remove 2 springs (26 & 27) and pull out the material needle (22) and attached parts (23, 24, & 25). Remove the piston by applying a few pounds of air pressure to the cylinder air inlet. This air pressure will cause the piston to pop out.

⚠ WARNING

Excessive air pressure applied to the piston during removal may cause the piston to exit at a high velocity, resulting in personal injury. When removing the piston, aim back of gun in a safe direction and do not use excessive pressure.

TO REPLACE NEEDLE SEAL AND GLAND ADAPTER IN FLUID INLET

Remove ratchet housing assembly (28), springs (26 & 27) and assemble material needle (22) and attached parts (23, 24, & 25). Proceed to the front of the gun and remove air cap assembly (1) and fluid nozzle (2). Then, using wrench (48), unscrew head insert (4) and remove fluid inlet (37 or 38). Unscrew packing nut (43) and remove spring (42) and seal backup (41). Using a no. 10 x 1-1/4" coarse thread wood screw (Binks part no. 20-6536) or small sheet metal screw, remove the needle seal (40) and gland adapter (39). Replace gland adapter (39) and needle seal (40). Reinsert seal backup (41), spring (42) and screw on packing nut (43) a couple of turns so it fits loosely by hand. Reassemble fluid inlet (37 or 38) to gun body (5) with head insert (4). Tighten head insert using wrench (48). Reassemble fluid nozzle (2) and air cap assembly (1). Reinsert material needle (22) and attached parts (23, 24 & 25), springs (26 & 27) and screw on ratchet housing assembly (28). Finally, tighten packing nut (43) until it bottoms out on fluid inlet (37 or 38).

CLEANING

In certain states it is now against the law to spray solvents containing Volatile Organic Compounds (VOCs) into the atmosphere when cleaning a spray gun.

In order to comply with these new air quality laws, Binks recommends one of the following two methods to clean your spray finishing equipment:

1. Spray solvent through the gun into a closed system. An enclosed unit, or spray gun cleaning station, condenses solvent vapors back into liquid form which prevents escape of VOC's into the atmosphere.
2. Place spray gun in a washer-type container. This system must totally enclose the spray gun, cups, nozzles, and other parts during washing, rinsing, and draining

cycles. This type of unit must be able to flush solvent through the gun without releasing any VOC vapors into the atmosphere. Additionally, open containers for storage or disposal of solvent, or solvent-containing cloth or paper, used for surface preparation and clean-up may not be used. Containers shall be non-absorbent.

To clean the gun, flush the fluid lines with solvent and blow air through the air lines to make sure all the air passages are dry.

⚠ CAUTION

Never completely submerge the gun in solvent as this will dissolve the lubricating oil and dry out the seals.

TROUBLESHOOTING

FAULTY SPRAY

A faulty spray may be caused by improper cleaning, dried materials around the fluid nozzle tip or in the air cap. Soak these parts in thinners that will soften the dried material and remove with a brush or cloth.

⚠ CAUTION

Never use metal instruments to clean the air or fluid nozzles. These parts are carefully machined and any damage to them will cause faulty spray.

If either the air cap assembly (1) or fluid nozzle (2) are damaged, these parts must be replaced before perfect spray can be obtained.

INTERMITTENT SPRAY

If the spray flutters, it is caused by one of the following faults:

1. Insufficient material available. Check supply and replenish if necessary.
2. Loose fluid nozzle (2). Tighten, but without using undue force.
3. Leakage at gland adapter (39) and needle seal (40). Tighten packing nut (43) if loose, and replace gland adapter and needle seal if necessary.
4. Fluid connection insufficiently tight or dirt on cone faces of connection. Correct as necessary.
5. Leaking cylinder air and/or inadequate pressure.

NOZZLE, AIR CAP, AND NEEDLE SELECTION CHART FOR 95AR AND 95ARV AUTOMATIC GUNS
